

EAGO EXPRESS ■

ENVISIONING A FUTURE FOOD DELIVERY PROCESS

01 SPECULATIVE DESIGN

What will happen...

After **30** years

2050

Both people and the planet are on the path to a regenerative world. Society consumes resources at the rate at which they can be replenished, populations are diverse, and societal structures are balanced.

FUTURE CITY STRUCTURE

FIVE KEY ELEMENTS

Social

Automation and AI technology would empower the smart city with fewer human mistakes.

Regulatory

On door delivery evolves to a daily phenomenon. City infrastructure are built to optimize the delivery system.

Technological

The IoT technology would ensure the food condition upon pickup.

Environmental

There would be an increasing appearance of ghost restaurants.
(Online restaurants without physical stores)

Economic variable

AI technology reduces the laboring cost. More robot employment for certain job with repetitive mechanism.

02 DELIVERY STORY

DEMOGRAPHICS

- Age: 29
- Gender: Male
- Ethnicity: Chinese
- Occupation: Machine Learning Engineer
- Income: 300k / year

HABITS

- Busy with work
- Prefers flexible time for eating
- Cares about health and food quality
- Stays up late
- Less time to cook his own food and brings to the workplace

    })}
  >
    {secondaryLink.label}

```

Still busy debugging a really complex website...

Hungry, endless task, and stressed-out...

A top-down, dark-themed photograph of a meal. In the center is a black oval plate with a cooked steak, sliced into several pieces, topped with a green herb sauce. To the left of the plate, a silver fork and knife are laid out. To the right, there is a small glass of red wine, a dark teapot, and a small round object. The background is a dark, textured surface.

“Is there a straightforward way to get some hot food?”

The background is a dark, textured surface covered in numerous small, glistening water droplets, suggesting a rainy day. Overlaid on this are several semi-transparent, overlapping circles in various colors: a bright blue circle on the left, a greenish-yellow circle in the upper left, a large light blue circle in the center, and a horizontal band of orange and yellow circles on the right. The overall mood is somber and atmospheric.

"On such a gloomy rainy day..."

How might we make the
door to door food delivery service
straightforward and effortless
with precise food quality preservation
for future busy workers?

APPENDIX

PROBLEM RESEARCHES

Top reasons for not ordering food online

NO.1 It's expensive!

Low Cost-Benefit Value

NO.2 Service not available

Many restaurants close at night/certain period

NO.3 Poor food condition

(Temperature, Appearance)

It's not only about **how quick the delivery is** but also the **service before food is packed and the service after food arrived.**

The whole experience matters!

Trouble with Human interaction

Inflexible time

Unclear location

Inaccurate navigation

Factors for
Inconvenient
human-interaction

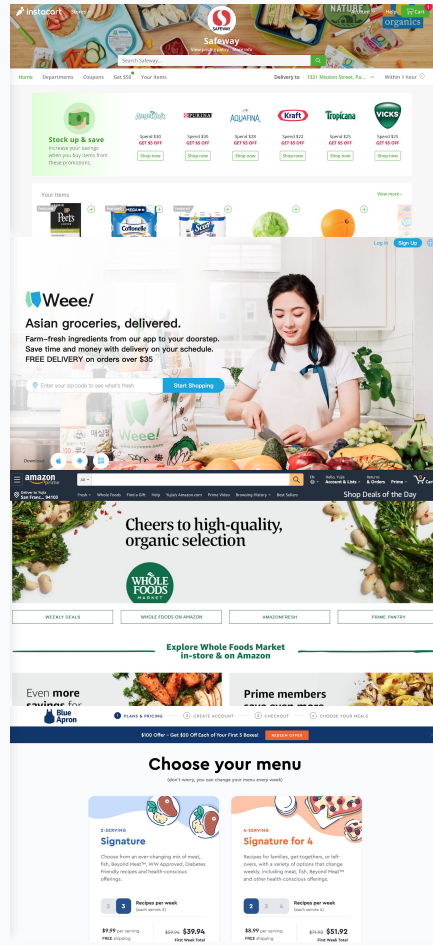

Busy millennials usually find it to be rigid and inconvenient to have high-quality food without any trouble when using food delivery services.

USER RESEARCH

Online food delivery is projected to have an important growth over the next years

Source: McKinsey&Company

Since 2014

digital ordering and delivery has grown 300% faster than dine-in traffic since 2014

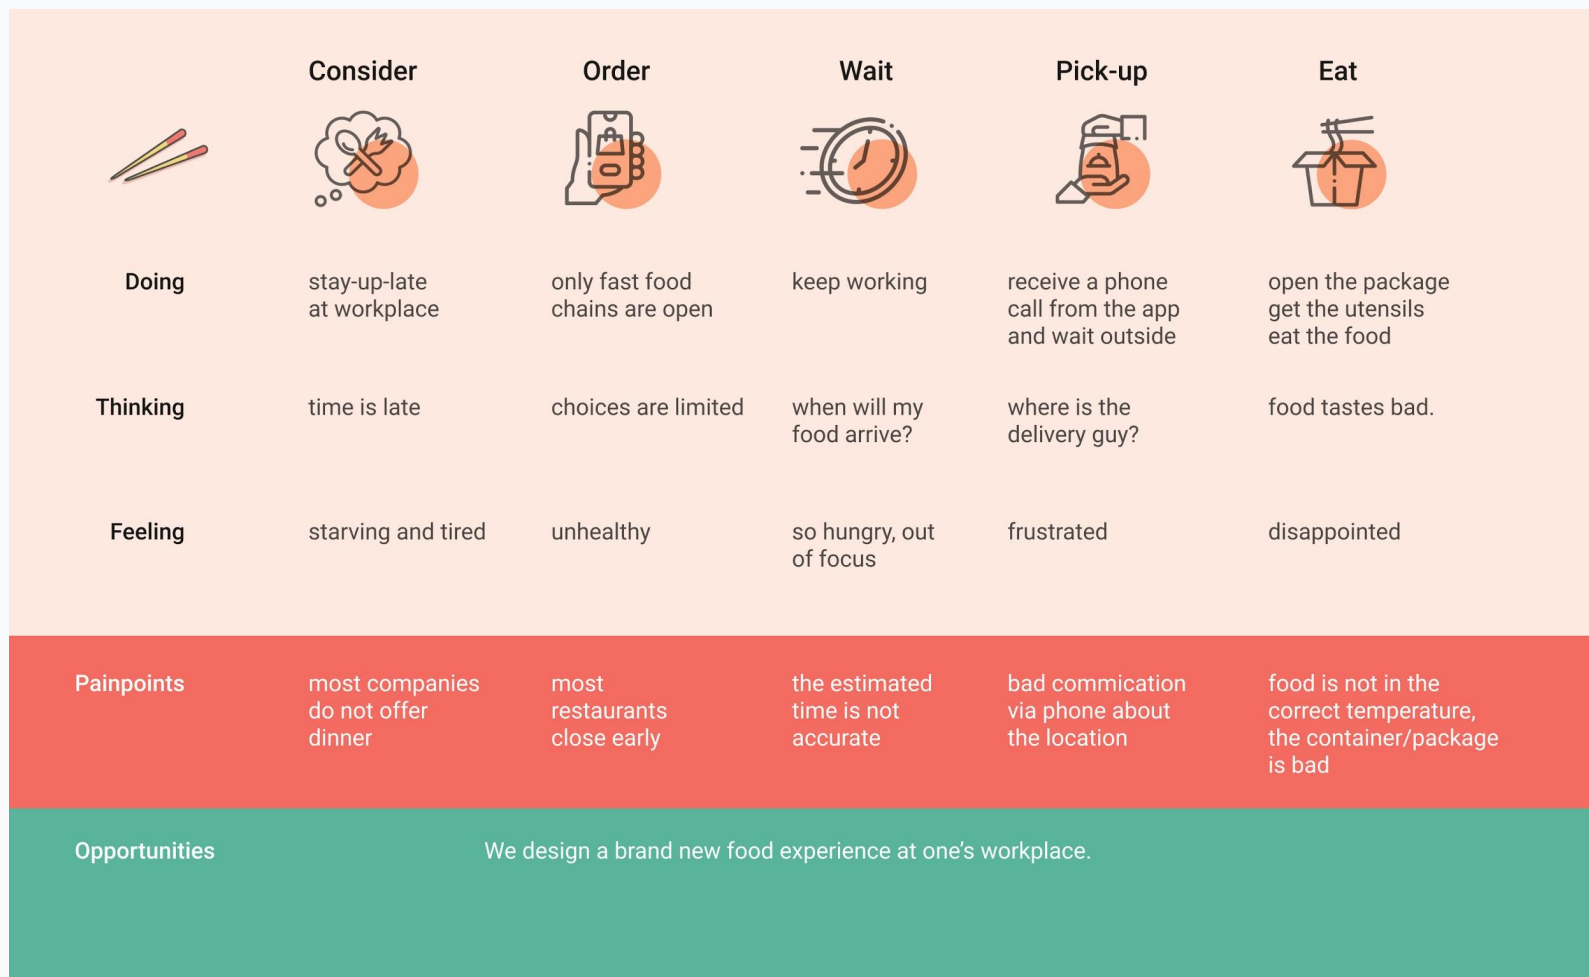

US Internet Users Who Used a Food Delivery Service to Deliver a Restaurant Meal, by Age, Feb 2018

57% of millennials

(amounting to 73 million people in the US alone) say that they have restaurant food delivered so they can watch movies and TV shows at home

Journey Map

It's time for lunch! However, David is still busy debugging for a really complex website...

Hungry, timeless, and stressed-out... "Is there a straightforward way to get hot food?" David thinks.

His co-worker recommends him EAGO EXPRESS. Curiously, David orders his lunch, and notices the delivery time is just 15 mins.

Receiving the order, EAGO EXPRESS picks up fried fish from the restaurant and keeps it in the special storage to maintain the right temperature.

When the food arrives, David receives a QR Code to open the storage of EAGO EXPRESS for safety and privacy.

David enjoys his fried fish in correct temperature on time. He feels great about the safe and straightforward experience.

FUTURE TREND

2050 Scenario

1

NO POVERTY

Poverty is at an all-time low.

2

ZERO HUNGER

Advances in GMO, organic, and precision agriculture feed the world.

3

GOOD HEALTH AND WELL-BEING

Predictive and precision medicine is affordable and inclusive. The global life expectancy is 79 years.

4

QUALITY EDUCATION

Education levels are increasing globally. 91% of adult's complete secondary education and 30% pursue tertiary. Life-long learning accounts are commonplace.

5

GENDER EQUALITY

Economic development and education have decreased fertility rates globally. 55% of governments report equal gender representation.

6

CLEAN WATER SANITATION

Watershed restoration has improved annual flows and water security.

7

AFFORDABLE AND CLEAN ENERGY

Renewable energy is affordable, small-scale and decentralised. Smart technology shifts control from the utility to the consumer.

8

DECENT WORK AND ECONOMIC GROWTH

A living wage is achievable in most countries. Employment is easy to sustain and levels are high.

9

INDUSTRY, INNOVATION AND INFRASTRUCTURE

Artificial intelligence is pervasive across municipal systems which are smart and flexible. Natural capital, green tech, and resilience are highly subsidised.

10

REDUCED INEQUALITY

The wealth gap is low. The most growth in GDP is seen in the middle class, which now holds the largest share. High foreign direct investment (FDI) in the Global South is focused on natural capital.

11

SUSTAINABLE CITIES AND COMMUNITIES

Urban spaces are inclusive with affordable housing and accessible green space. Green infrastructure is prioritised over grey with a focus on resilience.

12

RESPONSIBLE CONSUMPTION AND PRODUCTION

Economies are circular and value based. Natural capital is integrated into financing.

13

CLIMATE ACTION

Collaborative decarbonisation efforts have been made globally across sectors. Global mean temperature rise has remained below the 1.5oC target and the sea level has risen less than expected.

14

LIFE BELOW WATER

Marine protected areas more than doubled since 2019. 95% of the Great Pacific Garbage Patch has been cleared.

15

LIFE ON LAND

Global forest cover has increased 30% since 2019. Key carbon stores (rainforests, soils, grasslands, wetlands, etc.) are intensively restored.

16

PEACE, JUSTICE AND STRONG INSTITUTIONS

80% of governments are democratically elected. Civil liberties, such as freedom of press, religion, and expression, are at an all-time high. Data collection is high, but anonymised, open, shared, and inclusive with high accountability.

17

PARTNERSHIPS FOR THE GOAL

Global relationships are stable and international institutions successfully facilitate global protocols.

WORLD DEFINITION

Where and when does your story take place?

Post-anthropocene, where society consumes resources at the rate at which they can be replenished. Most populations are well-educated and wealthy.

What circumstances lead to your concept's adoption? Why does your concept gain traction and grow?

1. Affordability: Most populations are wealthy, and drone delivery is affordable for them.
2. Need: People enjoy better education, care more about health and want better convenient services.
3. Sustainability: Global ecosystem services are recognised and valued, helping to improve the quality of both planet and society.

How has society been defined by the concept?

Both people and planet are on the path to a regenerative world. Society consumes resources at the rate at which they can be replenished, populations are diverse, and societal structures are balanced. Workers are paid a living wage and can pursue jobs that they enjoy and find meaning.

Are there any economic, environmental, political, or technological events that are important to the story?

1. Economic: Poverty is no longer a issue.
- 2.1 Political: UN promulgates the No War Decree to protect world's harmony.
- 2.2 Political: IUCN promulgates Sustainable Development Decree to protect the environment.
3. Technological: Thanks to the 4th Technique Revolution, advanced AI and IoT techniques are widely used and benefits the populations in their everyday life.

Key Exponential Trends

Potential Trends

Coworking Spaces Trend

The need for coworking spaces is growing rapidly worldwide. The number of global coworking spaces will grow from 14,411 in 2017 to just over 30,000 in 2022; The number of coworking members will grow from 1.74 million in 2017 to 5.1 million in 2022 at an average annual growth rate of 24.2%

Tiny Robots for Food Delivery

San Francisco-based Starship Technologies is planning to deploy more than 1,000 robots to colleges and workplaces by the end of the year. The tiny robots can deliver your lunch for you.

Inspiration

Electrolux's 2019 showcase in Stockholm aims at solidifying its place in every house and kitchen, with products that combine remarkable tech with remarkable usability. Their Intuit range of kitchenware aims at bridging the gap between artificial intelligence and expert cooking. This bridge allows users to rely on AI to assist in meal preparation.

<https://www.yankodesign.com/2019/06/12/kitchens-and-homes-of-the-future-everything-in-store-at-electroluxs-2019-product-showcase/>

Togo transforms a single sheet of paperboard into a hyper-efficient purse for your meal. The base element is card stock carrier that has a large circular cutout in the center to hold a drink and a smaller one offset to store a straw. On the left is what can best be described as a burger holster, and the opposite side features a v-shaped cut that acts a hook.
